House & Apartment

YOUR TOTAL ARCHITECTURAL HARDWARE SOLUTIONS

Contents

IR Security & Safety and IR Architectural Hardware are companies within the worldwide Ingersoll-Rand group of companies. We are committed to providing a total solution of the highest quality, from specification and scheduling, to manufacturing and supply of the complete package for apartments, houses and business.

With the ever-increasing technical complexity of building, fire and disability code compliance, it is now more important than ever to specify the appropriate product for security and life-safety. Let our team of technically trained consultants assist your product specification and door hardware scheduling to ensure these codes are met.

We have sales offices located in Adelaide, Brisbane, Melbourne, Perth, Sydney, Auckland, Christchurch, Wellington, and are happy to discuss any requirements or queries you may have.

Total solutions

Independently or as an integrated total solution, we can tailor an option to suit your individual security and safety needs for home and business.

IR Briton - Door Closers, Emergency Exit Devices, Fire Door Controls

IR Cisa - Euro Mortice Locks, Hotel Locking Systems

IR Dalco - Bathroomware, Door Furniture, Entrance Handles, General Hardware, Grab Rails, Hinges, Latches

IR Dexter by Schlage - Door Furniture

IR Dor-O-matic - Swing and Sliding Doors (Refer IR LCN)

IR Duralock - Hotel Locking System

IR Falcon - Door Furniture, Locks and Latches

IR Geoffrey Industries - Building Management Software

IR Glynn-Johnson - Door Controls

IR Ives - Door Controls, General Hardware

IR J Legge - Locks and Latches

IR LCN - Auto Equalisers, Door Closers, Fire Door Controls, Savant Auto Sliding Door, Quantum Auto Swing Door

IR Legge Pacific - Door Furniture, Electric Lock, Locks and Latches, Keying Systems, Hotel Card Access System

IR Legge Pacific Regent - Door Furniture

IR Locknetics by Schlage - Software Managed Access Systems, Access Control Biometric Readers, Electromechanical Locks, Electromagnetic Locks, Electronic Control Systems and Releasing Devices

IRME - Euro Mortice Locks

IR Microlock - Electric Strike

IR Mustad - Floor Springs

IR Normbau - Healthcare hardware

IR Randi - Door hardware

IR Recognition Systems - HandKey: Biometric Access Controls, HandPunch: Time and Attendance

IR Schlage - Door Furniture, General Hardware, Keying Systems, Locks and Latches

IR Total Door Solutions - Breakout Closer, Reduced Swing Door

IR Von Duprin - Emergency Exit Hardware Electronic Door Control Products, EAC by Von Duprin

MECHANICAL   ELECTRONIC   BIOMETRIC

SSS - Satin Stainless Steel (US-630, US32D)

STP - Standard Powder Coat

SE - Silver

Product application classification (Aus/NZ)

Residential and Light Commercial
Moderate use. Typical applications include residential homes, apartments and low traffic offices.

Commercial - Moderate to high traffic flow. Typical applications include classrooms, storerooms, entrance / fire applications.

Heavy Commercial - Excessive high usage / high security subject to abuse. Typical applications include prisons, stairwell doors and air pressure differential.

Ratings

Symbol indicating that door hardware has been **Fire Rated:** successfully tested on a fire door assemblies as specified in Australian Standard AS 1905.1-1990 Part 1 Fire Door.

Ingersoll-Rand Architectural Hardware Ltd, Auckland, New Zealand is an approved Quality Endorsed Company in compliance to AS/NZS ISO 9001:2000. Bureau Veritas Quality International (BVQI) is an accredited body and is registered on JAS-ANZ Worldwide Register of Accredited Bodies and Certified Organisations.
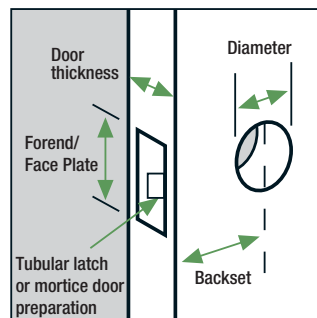

Handing

In some cases you will need to specify handing. Where you see the hand icon, check the handing diagram pictured below and specify the lever handing you require.
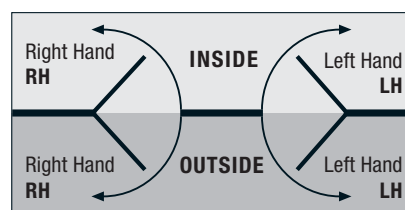

Common terms

Door Preparation - A term used for the cut-outs or holes made to the door for the particular lock being installed.

Backset - The distance from the edge of the door to the centre line of prep in door.

Door Thickness - The measurement from outside front through to outside back of door. All locks have a minimum / maximum door thickness which they will fit.

This programme is a mutually beneficial arrangement between the building company and IR Architectural Hardware, via trade merchants. It is also a response to building companies desire for quality products, robust warranties, simple but effective key control, and time-saving installation. Product marked with the house icon is included in the Building Partnership Programme. IR Schlage, IR Legge Pacific, IR Dalco, IRME and IR Cisa are world-renowned architectural hardware brands offering affordability and durability.

Ordering instructions

Located below each product is a table containing the required order code summary. Otherwise please refer to the Price Book.

Services

Scheduling – A comprehensive door schedule specification service is provided. Door hardware schedules are available with no obligation.

Building Partnership Programme Residential Construction Keying - RCK system, involves a single key, replicated to be used by tradesmen for all homes during the construction phase, making multiple contract people access simple. Building companies will be supplied 25 keys free (additional keys by negotiation), which can be reused on future houses/apartments. Each building company receives a personalised RCK system, so no two building companies have the same keys. When the new homeowner takes over the house, they are presented with their own keys, which when used automatically resets the lock cylinder, making the RCK inoperable and providing the homeowner with their own unique combination.

Master Keying – Master Keying is a method of controlling access through a building. A key schedule is prepared from provided floor plans. Includes a key tracking system which locates keys and locks and keeps a secure procedure on what keying has been undertaken. Security is based on a system where one lock has its own key. This key will not operate any other locks in the system however where all locks are in the same system the locks can be operated by the one master key.

Keyed Alike – KA - More than one lock being operated by the same key.

Keyed To Differ – KD – One lock is opened with a single key.

Lever dimension guide
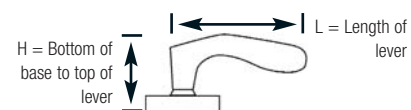

For more dimensions refer to the Price Book.

Door Furniture

Deciding on what door furniture best suits your needs can be difficult.

When you dream about your ideal new home, what features do you see? What features will make your home fashionable, unique and safe. Creating an environment that is luxurious means that the finishing touches could add to, or destroy the effect you were looking to achieve. As such, choosing the appropriate door furniture becomes an important part of the overall design.

Securing your home and property is very much about the level of security and hardware selected and installed. Making decisions on door furniture means reviewing product designs that suit the architectural style of the home. There are manly decisions to be made, levers or knobs, which finish to select and will it match with furniture hardware and joinery, are the doors wooden, metal or aluminium, what function is required for each door. IR Architectural Hardware offer a range of leading hardware brands for the residential, light commercial and commercial use to help you select door furniture with confidence and peace of mind.

Locks & Latches

Keeping your home safe and secure is an important responsibility.

When you arrive home from a busy day can you image yourself relaxing in the lounge, do you see your family and friends gathered around the dinning room table, or getting a good nights sleep in the master bedroom.
Our homes are important havens – a place to enjoy, feel comfortable and secure.

Burglars select homes where it is easy to force a door or jimmy a lock. It is the home owners responsibility to deter the burglar and there are many things you can do to keep your house or apartment safe and secure. Do your homework and ensure that you select the best lock for the door type. Whether you are selecting a tubular latch or euro profile mortice lock you will need to determine the level of security required. Make sure that any lock fitted to your home meets Australia and New Zealand Standards. Taking a positive approach to home security means ensuring that the best level of security and life safety is selected for your property, family and friends.

Door Controls

No more slamming doors, door closers bring peace and quiet to your home or building.

Today there are many innovative door closers on offer for a wide range of applications in homes, apartments and commercial settings. A door closer can be used on interior and exterior doors, on fire doors or standard doors, high security doors or used by people with special needs.

IR Architectural Hardware believe that home owners should feel free to enjoy their apartment or house with the piece of mind of knowing that property, friends and family are secure with no doors left open.

Exit Devices

Need solutions for managing building access and foot traffic.

With increased awareness and regulations regarding the building codes and compliance Exit Devices have an important role to play in a buildings access management, security and life safety. The key determinants for selecting an Exit Device are the amount of foot traffic that would need to be evacuated in time of an emergency, the type of door for the installation and the design the best suit the buildings décor. IR Architectural Hardware can offer a range of Exit Devices and other supporting door hardware.

Architectural Recommendations

When selecting a finish, it is important to consider climatic conditions and usage. This is especially true in areas subject to strong corrosive vapours, humid climate, sea air or high use, all of which may have damaging effects on metal finishes. The longevity and preservation of the finish is determined by the base metal and finishing processes. We highly recommend products with our Satin Stainless Steel (SSS) finishes for applications subject to challenging conditions such as salt air, humid climate or strong corrosive vapours. For high-wear environments, use the Stainless Steel (SSS) finishes, the Bright Chromium (CP) or Satin Chromium (SCP) finishes.

Care

Various types of hardware finishes require different methods of cleaning and care. The type of base metal and finishing processes must be considered when applying a cleaning method. Stainless Steel and Chromium Plated finishes may be cleaned with mild soap on a damp soft cloth. Soft finishes should NOT be cleaned with soaps or solvents. Instead, a clean, dry soft cloth should be used to wipe away dirt. Solvents should not be applied to any of or finishes.
